

In the Specification:

Page 1, please amend the first paragraph as follows:

This invention bears a distinct relationship to my pending Continuation-in-Part application "Golf Swing Position Trainer Teaching a Golfer to Swing a Golf Club Correctly," Serial No. 10/408,041, filed April 7, 2003, now U.S. Patent No. 6,800,036. The instant application is a Continuation-in-Part of my copending design case entitled "Dynamic Golf Swing Trainer," Serial No. 29/190,837, filed September 29, 2003, now U.S. Patent No. D493,503. The teachings of both of these inventions and the respective patent applications are hereby incorporated by reference into the instant case patent application.

Page 6, last four lines, and continuing onto the first five lines of Page 7, please amend this paragraph as follows:

My presently pending patent application entitled "GOLF SWING POSITION TRAINER TEACHING A GOLFER TO SWING A GOLF CLUB CORRECTLY," Serial No. 10/408,041, was filed April 7, 2003, has. That application has now ripened into U.S. Patent No. 6,800,036, with that invention having been commercially successful in that it taught proper club shaft plane, along with proper radius between the left wrist and the chest of a right-handed golfer. However, my previous invention did not serve to assure a square club face and proper forearm rotation from the setup all the way to the finish. The relevant teachings of that invention are hereby incorporated by reference into this case.

Page 9, paragraph 6, please amend the description of Figure 2 as follows:

Figure 2 is a close up view of the upper, U-shaped portion of my dynamic golf swing trainer, which reveals that a substantially 180° bend is formed, with this figure also revealing the various sections that are successively brought into contact with the left forearm of a right-handed golfer during the swinging of the club, thus to assure proper wrist position at each phase of the swing;
